Analytika ${ }^{\circledR}$ spol. s r.o., Ke Klíčovu 2a/816, 19000 Praha 9

## Primary methods Determination of the analyte mass concentration

in single element water calibration solutions

Martin Vlasák, Zuzana Luxemburková, Václav Sychra www.analytika.net; sales@analytika.net

Gravimetric preparation of water calibration solutions and analyte mass concentration determination

## $\gamma(\mathrm{A}) \pm \mathrm{U}$

## Sodium calibration solution in 2\% (v/v) nitric acid (Kragten spreadsheet)

| Sodium std. solution in 2\% nitric acid | Average sample weight | Volume of the sample analysed (std. solution) | Gravimetric factor | Repeatability of the analysis |
| :---: | :---: | :---: | :---: | :---: |
|  | a [g] | b [ml] | c [1] | repeatability [1] |

## Standard calibration solutions analysed

## Analytika, spol. s r.o., Czech Republic

National Institute of Standards and Technology, USA
Fluka, Sigma Aldrich Production GmbH, Switzerland
Alfa Aesar GmbH, Germany
Ultra Scientific, USA

## Conclusion

- primary methods (gravimetry and titrimetry) are capable for the determination of a nominal value of the analyte mass concentration with acceptable uncertainty below $0,2 \%$ (rel.)
- metrological compatibility between analyte mass concentration value found and certified was for more than 60 solutions fulfilled

## Acknowledgement

## Many thanks to all colleagues

from Analytika, spol. s r.o.,
namely to Dr. Václav Sychra, Ph.D.
for valuable comments and cooperation
!! Thank you for your attention !!
